Review of comparable OSINT literature [33] to conceptualize the topic and derive the research question (problem centered).	Derivation of design objectives from the research question and gaps in OSINT research.	Systematic literature review [33] using specified categories for the creation of the trend radar.	Demonstration of the trend radar through expert interviews [14] and survey on the practical application of the technologies.	Evaluation of the interviews via a qualitative content analysis [44], to validate the trend radar.	Presentation of research gaps and practical deviations for practitioners and future research.
